Enhancement of aquaculture performance of cobia, *Rachycentron canadum* (Linnaeus 1766): A review

Published On: March 30, 2024 | Pages: 001 - 008

Author(s): Babatunde Taofik Ademola*

Cobia, *Rachycentron canadum*, is a marine fish with recognized potential for aquaculture due to its fast growth rate, high fecundity, disease resistance, and quality flesh. However, much progress has been made to overcome problems associated with aspects of cobia production, including broodstock management, fingerling production, larval-rearing, grow-out, and disease m ...
