Climate-Driven Alteration of Salmon Migration Habits in Alaska

Published On: September 25, 2026 | Pages: 017 - 022

Author(s): Olcay Akman*

Climate change is altering the timing, duration, and environmental conditions associated with salmon migration in Alaska. Because salmon move between freshwater and marine environments during different life stages, they are exposed to warming rivers, changing streamflow, reduced snowpack, altered ocean conditions, and shifting food availability. Long-term observations ...
